2015

Engineering and
sales in solar

Your roof has worked for free long enough. Let it start paying you.

Residential solar under the PM Surya Ghar Muft Bijli Yojana, designed, installed and serviced by our own engineering team.

Your electricity bill is not just a bill. It is a monthly cost that keeps rising.

Every month, you pay for electricity your roof could be producing.

A family paying ₹3,000 per month today could pay nearly ₹15 lakh to the grid over the next **25 years**, while its rooftop remains unused.

“

*The question is not whether to go solar.
It is who you trust to do it right.*

”

FOUR CONCERNS. FOUR CLEAR ANSWERS.

Will the paperwork take months?

We manage the portal application, DISCOM coordination, inspection and net-meter process. You also receive a written commissioning calendar at the time of booking.

Who will install the system?

Our own engineering and installation team. No franchise partners or unknown subcontractors. The system is designed and installed by the same team.

How will I receive the subsidy?

The application is made in your name, and the approved subsidy is credited directly to your bank account. We assist with the documentation and follow-up.

What happens after installation

Your service schedule is planned before commissioning, with clearly defined visits rather than only a customer-care number.

The PureLife Promise

- A date, in writing. Commissioning calendar issued at booking.
- One accountable name: Designed by a PureLife engineer, installed to PureLife's SOP, commissioned under a PureLife engineer's sign-off. Your warranty and service contract sit with us – not a third party.
- Zero subsidy risk to you: Credited straight to your account, in your name.
- Full paperwork handled: Portal, DISCOM, net meter, inspection.
- Post-commissioning service schedule: Dated visits, booked in advance.
- ALMM-compliant, DCR-approved components: Subsidy-eligible by design.

WHAT YOUR ROOF EARNS

System	Suits a bill of	Units/month	System Cost*	Central Subsidy	Your Net Cost*
2kW	₹1,500 – ₹2,500	~240	₹1,50,000	₹60,000	₹90,000
3kW	₹2,500 – ₹4,000	~360	₹2,10,000	₹78,000	₹1,32,000
5kW	₹4,000 – ₹6,500	~600	₹3,10,000	₹78,000	₹2,32,000

System	Monthly Saving	Yearly Saving	Payback	25 Years Saving
2kW	~1,920	~23,000	~3.9 years	~₹5.76 lakhs
3kW	~2,880	~34,500	~3.8 years	~₹8.64 lakhs
5kW	~4,800	~57,600	~4 years	~₹14.4 lakhs

FIVE STEPS. START TO FINISH.

**Estimates based on 4 units per kW per day for Hyderabad and a tariff of ₹8 per unit – we deliberately use a conservative tariff, so your real savings are likely higher as DISCOM rates rise. Subsidy slabs as per PM Surya Ghar Muft Bijli Yojana; there is no separate state top-up. Final price depends on roof height, mounting structure, consumables and DISCOM charges – we quote after a free site survey, never before.*

What a 3 kW roof does for You

The savings are yours. The clean air is everyone's. Here's what one average home system displaces in a single year.

CARBON DIOXIDE AVOIDED

3.1 tonnes

per year

Over 25 years: about 77 tonnes kept out of the air.

EQUIVALENT TO PLANTING

139 trees

every year

A grown tree absorbs roughly 22 kg of CO2 a year. Your roof does the work of a small grove.

COAL NOT BURNED

2.6 tonnes

per year

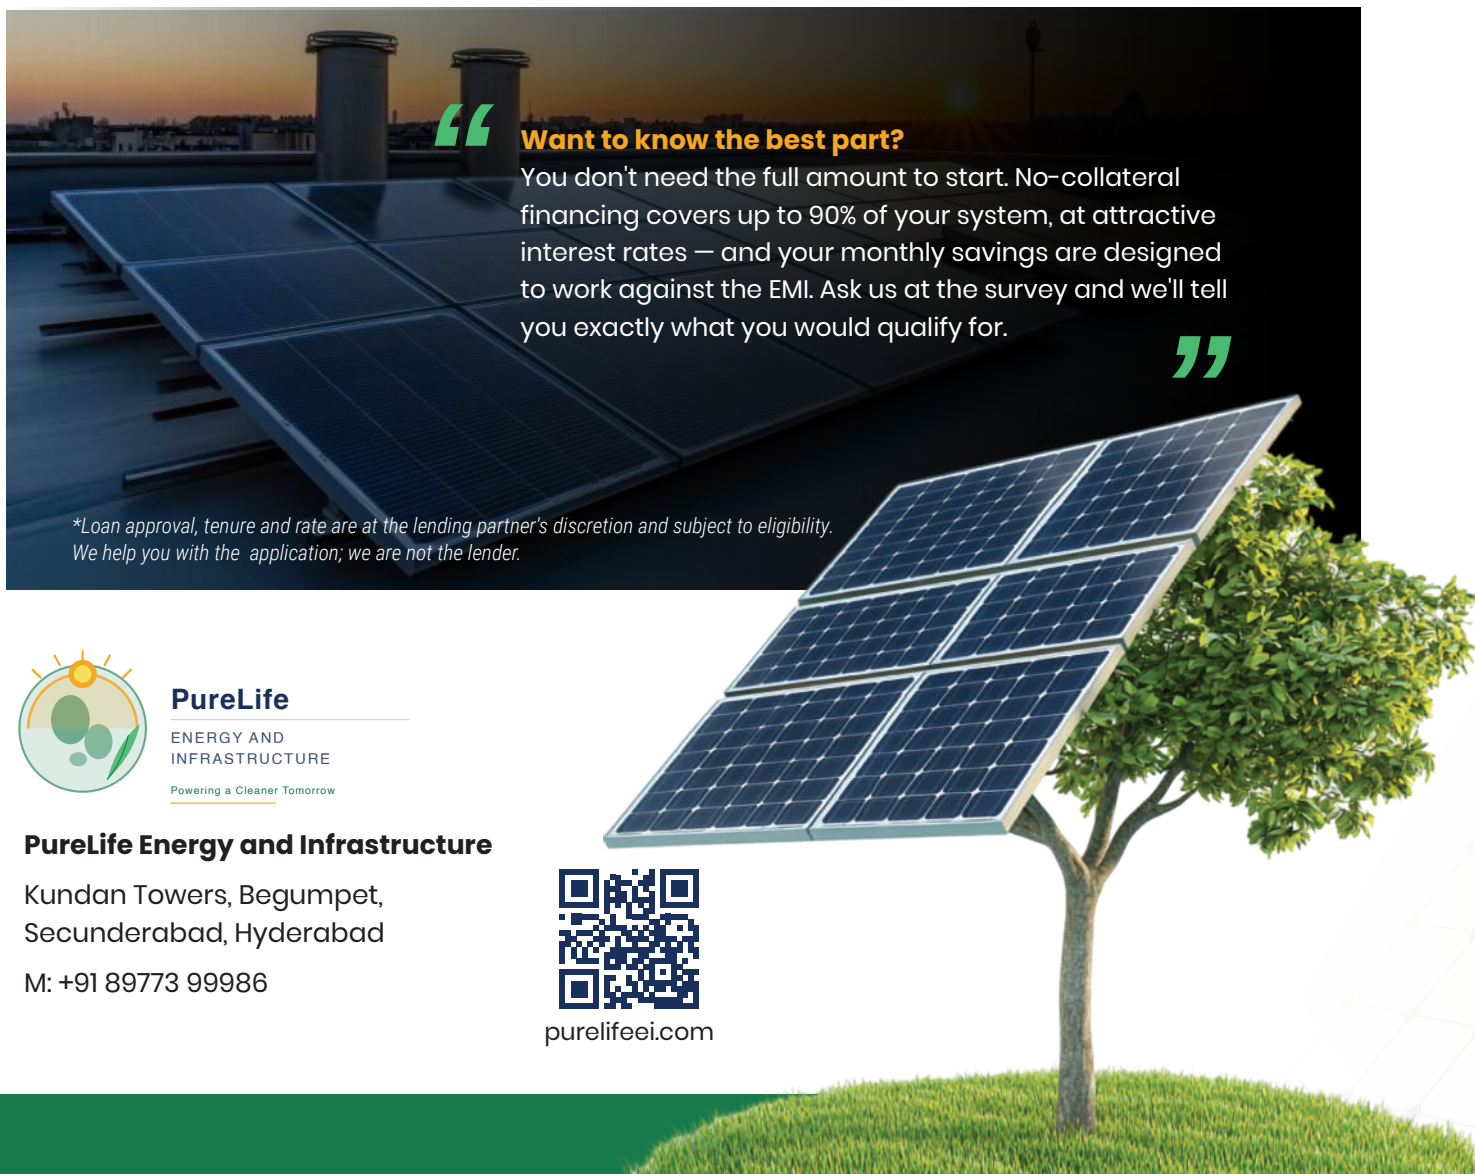

Roughly the coal a thermal station burns to serve one home for a year.

SAME AS TAKING OFF THE ROAD

17,000 km

of car driving

More than three years of average city driving, cancelled out annually. 139 trees every year.

“ Want to know the best part? ”

You don't need the full amount to start. No-collateral financing covers up to 90% of your system, at attractive interest rates — and your monthly savings are designed to work against the EMI. Ask us at the survey and we'll tell you exactly what you would qualify for.

**Loan approval, tenure and rate are at the lending partner's discretion and subject to eligibility. We help you with the application; we are not the lender.*
